Nindooinbah's Bull Sale

Welcome to our 4th Annual Sale.

It is great to see our industry outlook is so encouraging for those of us who are fortunate not to be in the grip of dreadful drought.

It is pleasing to see the increasing emphasis our northern producers are placing on genetics sourced with the full suite of performance measurement data. This is a very positive development for our industry.

Cost pressures continue to depress profitability and this will deliver the industry significant productivity improvements.

Our genetics have travelled far and we only need to conquer Bass Strait to see them in all Australian states. We are hoping to see that goal kicked at this sale or in the next 12 months!

We are committed to using the best technologies available to continuously improve our genetics and I think this years offering is our best ever.

I congratulate Nick and our team for putting together another group of exceptional cattle.

We look forward to continuing to work with our returning clients and to our new clients.....Welcome to our Nindooinbah family.

Best regards,

Kaye & Euan

NINDOOINBAH STUD CATTLE MANAGEMENT PROGRAM:

At birth all calves are weighed and tagged with management tags, Dam ID tag and electronic ID. This data is submitted to Breedplan for calving traits. Prior to weaning all calves have had 7 in 1, Botulism injections. At weaning they are weighed and vaccinated with three-germ blood. Post weaning they finish their "calving vaccinations" with Pestigard.

The weaners are freeze branded with their tattoo number and have carcass ultrasonic scan data taken between 400 and 600 days plus a weight by an accredited technician. The weaners are kept in large management groups so we can make full use of the Breedplan analysis.

The stud cattle are pasture fed and supplemented in the paddock at key points in the year. Their weights and condition are monitored so that they develop well during this critical phase of their life.

Annual boosters 7 in 1, Pestigard, Botulism and BEF (three-day sickness). Bulls receive Vibrio. Booster vaccinations will be due in September 2016.

Females are programmed in a fixed time AI program, cover bulls are used 14 days after AI. A final preg test is done between 40-60 days by Ultrasound.

The bulls undergo full Veterinary Bull Breeding Soundness Evaluation (VBBSE) results will be available via the web and a supplementary on sale day.

During mustering at Nindooinbah we expose our cattle to as many different styles as possible. We regularly use horses, dogs and motorbikes using Low Stress Stock Handling principals. A great deal of time is spent with them in the paddock on foot or with vehicles. Good temperament is very important particularly with animals that are being handled so frequently.

Preliminary tick treatments have been done and cattle are eligible to be presented to the clearing dips.

WELCOME FROM NICK

The 2015 Nindooinbah Bull and Female sale is a fantastic offering of 93 bulls and 50 females from the Nindooinbah breeding program. This years bulls include some total outcross genetics from the renowned Cow Creek Ranch, Mississippi, USA. This stud started the Ultrablack breeding program in the US and has now positioned the Ultrablack breed to be commonplace amongst Angus and Brangus breeders. We chose these genetics for introduction to our breeding program because of their outstanding fertility and multigenerational, total outcross, lineage.

All bulls have gone through a Bull Breeding Soundness Evaluation (BBSE) and a list of results will be available on sale day. We endeavour to performance record all cattle bred on Nindooinbah. I believe in the philosophy of "What gets measured; gets managed". The team at Nindooinbah does a terrific job of collecting all the relevant data to deliver performance indicators that maintain constant improvement in the cattle we breed. We also have ongoing, major research projects running in conjunction with our breeding programs to further improve cattle breeding in general. It is a stimulating environment to be involved in.

It has been an interesting time for the cattle industry recently with the EYCI sitting just under 580 at the time of writing. The market needs to be at this level, or higher, for producers to get a decent return from their businesses. With constant pressure on supply going forward for the unforeseeable future, there has never been a more important time to introduce quality genetics

into your herd. Bull selection presents an important opportunity to enhance the profitability of a beef production enterprise.

The females presented in this sale are a great resource for somebody looking to start an Ultrablack stud or enhance their Brangus operation. All heifers are PTIC and Nat McGhee has done a terrific job of (among other things) compiling the summary sheets with all the animal and joining details in this catalogue.

I look forward to seeing you at the sale and please contact me if you would like a pre sale inspection or further information on the cattle. There will be lot photos on our website and Auctions Plus, two weeks prior to Auction on the 15th of October.

All the best.

Nick Cameron
