Understanding the Australian Sheep breeding Values (ASBV)

Wwt

Weaning weight estimates the genetic difference between animals in live weight at 100 days of age. A positive ASBV is beneficial. (Top 10% of Dorpers/White Dorpers >6.5)

Pwwt

Post weaning weight estimates the genetic difference between animals in live weight at 225 days of age. A positive ASBV is beneficial. (Top 10% of Dorpers/White Dorpers >10.5)

Pemd

Describes the value of animals' genes for eye muscle depth at a constant weight.

A positive ASBV means a genetically thicker-muscled animal, and one that will have slightly more of its lean tissue in the higher-priced cuts.

A positive ASBV is beneficial. (Top 10% of Dorpers/White Dorpers >2.1)

Pwec

Describes the value of animals' genes for carrying worm burdens.

A combination of being of being genetically less likely to pick up worms and being better able to cope immunologically with the worm burden.

Wec ASBVs are expressed as a percentage relative to a count of 500 eggs per gram.

A **negative** ASBV is beneficial. (Top 10% of Dorpers/White Dorpers <37%)

Mwwt

Maternal weaning weight estimates the ewe's potential for milk production and ability to provide a better maternal environment. They are expressed as kilograms of live weight at 100 days of age.

A positive ASBV is beneficial. (Top 10% of Dorpers/White Dorpers >2.1)

NLW

Number of lambs weaned estimates the genetic difference for the number of lambs weaned at each lambing opportunity.

A positive ASBV is beneficial. (Top 10% of Dorpers/White Dorpers >7%).

SRC index

A dollar index indicates the value of an animal based on its suitability for a particular market.

The value is given in real dollar figures and expressed as \$/ewe joined/yr.

For example a dollar index of 105 indicates that a ram will produce \$5 extra value for every ewe joined compared to a ram with an \$ index of 100. (Top 10% of Dorpers/White Dorpers >127.9).

Animals that have EBVs in the top 10% of all Shedding sheep are highlighted in blue.

Animals that have EBVs in the top 30% of all shedding sheep are highlighted in yellow.

Understanding the Dorper Inspection system

Type - This is determined by the degree the sheep conforms to the breed standards.

Type 5 - A stud animal that is considered outstanding

Type 4 - A stud animal

Type 3 - (1st select) - A flock ewe that is considered average, but good enough to breed to an excellent ram to upgrade to stud level. A type 3 ram is considered good enough to produce prime lamb

Type 2 - a below average animal

Type 1 - Cull
