ACCESSIBLE PROVEN GENETICS

Dear Breeder,

We are proud to present this line up of sale bulls and welcome you to our 10th Northern Spring Bull Sale in Walgett.

Each year, we strive to provide our clients with the best Angus bulls in the breed. Bulls that will increase the profitability of you, our client and ultimately achieve an outstanding product for the consumer.

This line up of sale bulls has had more data collected on them than any other sale team. To add to the multitude of traits that we already measure, these sale bulls have also been part of a Net Feed Intake (NFI) trial at Tullimba research station near Armidale, NSW. The information we gather on NFI helps our clients produce a more efficient, profitable animal.

The average of this sale team is in the top 10% of the entire Angus breed for IMF%, the top 15% for the Heavy Grain \$Index, the top 20% of the breed for Scrotal Size, Days to Calving and the Angus Breeding \$Index, the top 25% for 200, 400, 600 day weight and the Heavy Grass \$Index.

Our 10th Walgett sale features sons of some of the most proven and high performance sires in Australia – bred with a focus on structure, fertility, calving ease, growth, carcase and temperament

Structure and Temperament

The best figures in the world don't add up unless conformation is king. This is why all Te Mania Angus cattle are independently assessed for structure against the most demanding benchmarks.

All bulls offered are out of an elite female herd that is formed by uncompromising standards. The 1,700 females are required to tick all boxes.

All females undergo the multitude of seedstock requirements and measurements (including structure and temperament assessments) in addition to passing commercial demands – calving at two-years-of-age unassisted and rejoining annually, whilst being managed under intensive commercial grazing conditions.

Progeny testing is also done under commercial conditions, through the 40 member herds of Team Te Mania, spread across SA, Victoria and NSW, providing enormous data from a range of climatic and geographic conditions.

Our aim is to provide and deliver the country's best genetics at commercially affordable prices, targeting –

- more calves on the ground
- that grow out faster
- comply at slaughter
- and produce productive female replacements

You are invited to join the Gubbins and McFarlane families
for an informal dinner of Angus steak at
The Barwon Inn, Walgett
Monday 8th August 2016 at 7 pm

Please reply to Te Mania Angus if you are able to join us.

BEEF CLASS STRUCTURAL ASSESSMENT SYSTEM

By Jim Green & Liam Cardile

Structural problems in cattle have a substantial effect on both the reproductive and growth performance of a beef herd. It is widely recognized that structural problems in sires have detrimental effects on conception rates, calving patterns and thus profitability.

Similarly, females with inadequate structural characteristics are more prone to weaning lighter calves or conceiving later in the breeding season than their more functional counterparts. These structural problems are filtered through the supply chain resulting in reduced income for the producer, feedlot and thus reducing the overall productivity of the Australian Beef Industry.

The current trend for improving consistency and quality of product has shifted producers' focus, towards selecting seedstock on carcass and growth genetic traits (EBV's). Whilst, this selection has been, and will continue to be pivotal in developing the Australian beef industry, we must not forget the fundamentals of livestock breeding.

The Beef Class Structural Assessment System was designed by the MLA, the BIA and several breed societies to address structural problems in the beef industry. Detailed analysis of three thousand animals in genetically linked herds indicated that structural characteristics such as leg and foot structure were moderately to highly heritable. BEEFXCEL now services many seedstock operations in their selection and grading of stock using the Beef Class Structural Assessment System.

Te Mania Angus is continually expanding their structural assessment program in order to optimise soundness and performance in their stock. The program involves an independent assessor from BEEFXCEL analysing the structural composition of the herd on an individual basis. The program used at Te Mania comprises of:

- An annual assessment of all sale bulls;
- An annual assessment of all breeding females and donor cows
- All animals deemed inadequate are culled.

An explanation of the Beef Class Structural Assessment System

The Beef Class Structural Assessment System uses a 1-9 scoring system for feet and leg structure;

- A score of 5 is ideal;
- A score of 4 or 6 shows slight variation from ideal, but this includes most sound animals. An animal scoring 4 or 6 would be acceptable in any breeding program;
- A score of 3 or 7 shows greater variation but would be acceptable in most commercial programs. However, seedstock producers should be vigilant and understand that this score indicates greater variation from ideal;
- A score of 2 or 8 are low scoring animals and should be looked at cautiously and inspected very closely before purchasing;
- A score of 1 or 9 should not be catalogued and are considered immediate culls.

SALE INFORMATION NORTHERN SPRING BULL SALE

128 BULLS

**TUESDAY 9 AUGUST 2016
WALGETT SALEYARDS 11.30 AM**

OUR GUARANTEE

Any Te Mania Angus bull that proves to be structurally unsound, infertile or incapable of service is guaranteed for up to three years from date of sale.

Under these circumstances Te Mania Angus will:

- 1) Replace the bull with a satisfactory substitute if available, or
- 2) Issue a refund equal to the value remaining* see below, less the salvage value.

**The guarantee covers the purchase value of the bull, without interest, cost and damages. The guarantee shall apply providing the bull's incapacity is not caused by injury or disease contracted since leaving Te Mania, the value remaining is calculated on the basis that the guarantee is reduced by one third of the purchase price for each year of service from the sale date. A veterinary certificate must be supplied by the purchaser on request.*

If any bull that is purchased does not possess a reasonable fertility, although not totally infertile, any dispute that may arise shall be settled by an arbitrator appointed by the auctioneers and must be lodged within 12 calendar months from date of sale.

We recommend that all purchasers discuss injury insurance of their bulls at the sale with their Agent. This guarantee is in addition to the normal terms and conditions governing auction sales.

HEALTH TREATMENTS

All the sale bulls are vaccinated for Vibriosis and Pestivirus (BVDV) prior to sale. We recommend that any bull that is purchased receives an annual booster for both these diseases.

All of our bulls receive 7 in 1 vaccinations at three-months of age, six weeks later and a booster as a yearling. They are drenched at weaning and periodically according to worm counts.

All Te Mania Angus bulls are examined by a veterinarian prior to sale day which includes palpation of the sexual anatomy and the circumference of the testicles. The jaw is checked for correct bite.

The Te Mania Angus herd is Monitored Negative Two (MN2) Status for Johnes Disease. Certificate Number is VC100.

GENETIC DISORDERS

**ALL OUR SALE BULLS ARE TESTED
FREE AND/OR PEDIGREE FREE OF:**

Arthrogryposis Multiplex (AM), Neuropathic Hydrocephalus (NH) and Contractural Arachnodactyly (CA), formerly known as Fawn Calf Syndrome.

Some sale bulls carry the Developmental Duplications (DD) recessive gene, please refer to each lot for notification.

For more information on AM, NH, CA and DD visit our web site www.temania.com.au

SEMEN RIGHTS

Please note the change to our semen marketing rights policy.

Te Mania Angus retains 100% of the semen marketing rights of each of the bulls in this catalogue. Semen may be collected by the purchaser, for within herd use only, semen cannot be sold to, or used by, a third party.

CATERING

Morning tea and lunch will be provided in support of Walgett Lambs Junior Rugby

SALE DAY PHONE NUMBERS

Tom Gubbins	0429 952 197
Hamish McFarlane	0427 641 606

PRE SALE INSPECTION

Bulls can be inspected at the Walgett Saleyards from Monday 8th August and from 7.30 am on the morning of the sale.

REBATES

A rebate of 3% is allowed to all agents nominating and accompanying buyers to the sale and settling within 7 days of the invoice. All agents wishing to nominate buyers must do so in writing to the vendor by 5pm on Monday 8th August.

Fax to Clemson Hiscox, Walgett 02 6828 3999.

GST

Bulls will be sold GST exclusive ie. If the bull is knocked down for \$4,000, you will be charged \$4,400.

TRAVEL/ACCOMMODATION

All-weather airstrip at Walgett is available. Enquiries to Chris Clemson 0428 287 222.

FREIGHT CONCESSION*

Te Mania Angus will provide a free freight service to transport bulls between Roma, Queensland and Dubbo, NSW en route through Walgett. Onward freight arrangements from Dubbo or intermediate points will be the buyers' responsibility.

* Conditions apply, see page 4 for more details

FREE FREIGHT

Te Mania Angus will provide a free freight service to transport bulls between Roma, Queensland and Dubbo, NSW en route through Walgett.

Onward freight arrangements from Dubbo or intermediate points will be the buyers' responsibility.

To make use of this service, and to allow Te Mania Angus to organise it promptly and efficiently, it is essential buyers notify Te Mania Angus if they wish to use this service before making any other arrangements.

This service cannot be made available to buyers who have already contracted for freight before having made contact with Te Mania Angus.

All other destinations are arranged at low cost to the purchaser.

Carriers

Dick Smith Transport of Dubbo have been invited to attend the sale to coordinate the delivery of stock. They can be contacted on 02 6882 2463 or 0428 636 236

YOUR NEW BULL, HIS PAST & FUTURE

Calves are weaned at four months of age. Early weaning was introduced a number of years ago to enhance rumen function and to allow females a better run through the Autumn and winter.

At Te Mania Angus all calves are weighed and tagged with an NLIS tag and stud tag on the day they are born. They are weighed again at weaning and at 400 days, when they are ultrasound scanned for marbling, fat cover and eye muscle area. Testicle measurements are taken on the bull calves. Heifers are weighed again at 600 days and all this data is submitted to Breedplan.

Cows are weighed at weaning to contribute to the Mature Cow Weight EBV. All cowherd mating details are recorded with Angus Breedplan, which calculates a gestation length EBV. Short gestation length is a crucial EBV to use along with Birth Weight when selecting young bulls to use over heifers.

All bulls receive 7 in 1 vaccinations at three-months of age, six weeks later and a booster as a yearling. They are drenched at weaning and periodically according to worm counts. They will also receive a drench before leaving the property. All Te Mania Angus bulls are examined by a veterinarian immediately prior to sale day. This examination includes palpation of the sexual anatomy and measurements of the circumference of the testicles.

STRUCTURAL ASSESSMENTS

Structural assessments are carried out by Jim Green and are provided for each bull throughout the catalogue. This ensures that any bulls not meeting our uncompromising standards for structure are culled by an independent assessor.

When a bull leaves Te Mania Angus, he is leaving the security of a large mob and will arrive at unfamiliar territory at your property. If you can't put him into the bull mob straight away, unload him and make sure he has a steer or cow as a companion. A young bull can move in with older bulls and settle in well, but remember, being the youngest he will get the last of the feed available because of the pecking order.

The paddock needs to be reasonably large so he can keep away from the others and find adequate feed. Young bulls are still growing fast and need enough feed to maintain their growth pattern and to be able to settle the cows quickly and efficiently.

Te Mania Angus bulls are accustomed to being handled by stockmen on motorbikes and with dogs. Most of the fences are electrified and the bulls treat them with respect. Always be considerate to your bull and handle him with respect and kindness. You will find you will receive these acts of respect back from him.

PESTIVIRUS (BVDV)

Pestivirus (also known as BVDV) is widespread in cattle herds worldwide. Te Mania Angus has taken three important steps to protect our clients:

- Cattle are all Ear notch tested before sale to make sure they are not PI
- A wide scale Ear notch testing/eradication program has been carried out – we believe Te Mania has no PI animals!
- All Te Mania bulls are Vaccinated prior to sale so they are protected in the event they come in contact with the virus after leaving Te Mania.

For information on BVDV go to www.temania.com.au

This is in line with world's best practice, and provides the highest level of protection possible against the terrible losses that Pestivirus can sometimes cause.

7 IN 1 VACCINATION

We recommend bulls be given a 7 in 1 vaccination annually, 2 to 4 weeks prior to joining.

VIBRIOSIS VACCINATION

Vibriosis is a common cause of infertility and is transmitted by bulls from one female to another. It is easily prevented by vaccination. Te Mania sale bulls have been given their primer and booster shots. For future years we recommend your bull be given an annual booster 4 to 6 weeks prior to joining.

BULL : COW RATIO

Under reasonable paddock conditions, a rising 2 year old bull should handle 40 empty cows on his own. An older bull can probably handle slightly more. A synchronized AI program can decrease the number of bulls needed, because cows become pregnant to AI, but be aware that if the returns are returning over one week rather than three, then this will increase your bull requirement. Please contact Te Mania Angus for further clarification if required.

BEFORE PUTTING THE BULL OUT

Before mating, cows should be seen cycling in groups with male calves also hanging around. The cows must be on a rising plane of nutrition, before you put the bull out, this ensures they have the optimum chance of cycling.

OBSERVING THE BULL

A bull is most likely to develop a condition or injury that causes infertility AFTER THE JOINING PERIOD HAS STARTED. It is vital that you monitor your bull at least twice weekly to ensure that he is able to mount cows and that he looks physically normal and is not lame. Towards the end of the mating period, you should spend some time watching the cows to make sure that large numbers of cows are not cycling. Set aside half an hour one afternoon when the cows are at rest to make sure that most of the cycling activity has stopped, and give yourself some peace of mind! Writing down the cows number at service and observing them 21 days later is the most thorough infertility check.

AFTER MATING SEASON

When the season is finished, the bull should be drenched and put away on good feed. Adequate feed will help stop fighting and help the bulls settle into their groups.

EBVS: WHAT, HOW AND WHY?

Angus GROUP BREEDPLAN is an advanced genetic evaluation system that provides a genetic description of Angus cattle for a large range of traits influencing fertility, growth and carcass performance. It provides predictions of the genetic merit of individual animals called Estimated Breeding Values (EBVs).

EBVs are based on all the available pedigree and performance records provided by breeders in Australia and New Zealand, along with available overseas genetic information.

EBVs are expressed in the units of measurement for each particular trait, and are shown as +ive or -ive values. The average EBV for different traits changes over time as the breed makes genetic progress. The averages for calves born in 2013 are shown at the bottom of each page. The averages are the easiest way to compare the merits of particular animals.

ACCURACY (%) Provides an indication of the reliability of an EBV. As more performance information becomes available on an animal, it's progeny and relatives, the accuracy of it's EBVs for particular traits increases. The higher the accuracy, the less chance that the figure for each EBV will vary.

CALVING EASE DIRECT (%) CE (dir) tells us the amount of calving ease we can expect from a particular bull, relating directly to the females he is joined to. The calving ease figures will generally only appear on the chart of a sire, but can also appear on a younger bull's chart if there has been a lot of information gathered on his relatives. A positive value here is better.

CALVING EASE DAUGHTERS (%) CE (dtrs) tells us the amount of calving ease we can expect from a particular bull's daughters. A positive value here is better.

GESTATION LENGTH (DAYS) This figure gives us a value relating to the number of days from the date of conception to the calf birth date. A shorter gestation length is better as it gives more time for the cow to get back in calf and there is less chance of the calf getting too big in the uterus and increasing the chances of calving difficulties. A negative value here is better.

BIRTH WT (KG) Birth weight gives us an indication of how much the calves of a particular animal will weigh at birth. This figure should be monitored, but be careful not to go too low as this can cause problems with calf mortality and calving ease down the track. We must also remember that only a small percentage of calving ease is related to birth weight.

200-DAY WT (KG), 400-DAY WT (KG) AND 600-DAY WT (KG) Estimates the genetic differences between animals in liveweight at 200, 400 and 600 days of age. For example, if you have two bulls, one with a 600 day weight figure of +70 and the other with a figure of +80, you would expect the bull who is +80 to sire calves that would average 5kgs heavier at 600 days than the other (the sire provides 50% of the genes to the calf, 10kgs divided by 2). A positive value for these growth figures is better.

MATURE COW WEIGHT (KG) This figure provides an estimate of the genetic differences between animals in cow weight at 5 years of age. We try and keep this figure below the 600 Day Weight figure.

MILK (KG) The Milk figure provides an estimate of the genetic differences between animals in milk production, expressed as a variation in the 200-day weight of their daughter's calves. Angus cattle generally don't have a problem providing enough milk for their offspring, so we don't really need to worry too much about pushing this figure. Too much milk can lead to udder problems and difficulty in getting back in calf, so try to keep it positive, but remember the implications of too much milk.

SCROTAL SIZE (CM) This figure tells us about the scrotal circumference of an animal at 400 days of age. We measure scrotal size because there is a strong, positive correlation between scrotal size and fertility in the male and female offspring. The larger the testicles, the higher the likelihood of that bull siring more fertile daughters and getting more females in calf. A positive figure here is better.

DAYS TO CALVING DC tells us about female fertility, it is expressed as the number of days from the start of the joining period until subsequent calving. A more fertile cow, i.e. one that gets in calf earlier is obviously more beneficial in a breeding program. A negative value here is better.

CARCASS WEIGHT (KG) Carcass weight provides us with an estimate of the variation in carcass weight of a particular animal's progeny at slaughter (this figure is adjusted to 650 days of age), the higher the number the better.

EYE MUSCLE AREA (CM²) Results from ultrasound scanning of cattle at 15 – 18 months of age is used to calculate the expected genetic differences between animals in eye muscle area at the 12/13th rib site, in a 300kg carcass. This figure gives us a good idea of the muscling ability of the animal, the more muscling an animal possesses the better, so the higher the value here the better.

RIB AND RUMP FAT (MM) Ultrasound scanning is also used to calculate these figures which estimate the genetic differences between animals in fat depth at the 12/13th rib site (Rib Fat) and P8 rump site (Rump Fat), in a 300 kg carcass. Very fat cattle may produce less yield, however cattle that are too lean, may run into fertility problems, so these figures need to be monitored. The best way to monitor yield and fertility however, is by not necessarily concentrating on fat, but by keeping an eye on yield and fertility!

RETAIL BEEF YIELD % (RBY%) RBY% tells us the expected genetic differences between animals in percentage retail beef yield, in a 300kg carcass. A positive figure here is better.

Intra-Muscular Fat % (Imf%) – Marbling is very important for the premium markets. We can use ultrasound scanning (highly correlated to actual marble score) to provide us with an EBV that estimates the genetic differences between animals in marbling at the 12/13th rib site, in a 300 kg carcass. A positive value here is better.

NET FEED INTAKE (NFI) Estimates of the genetic differences in the feed intake for animals adjusted to the same growth rate and weight base. Feed efficiency is one of the most economically important production traits. It particularly affects profitability of feedlots, but is also significant for grazing enterprises.

For three years now we have been taking blood samples of our herd for the purpose of testing Insulin-Like Growth Factor (IGF-1) which is moderately heritable (0.4) and correlated to NFI.

A negative value here is better

UNDERSTANDING SELECTION INDEXES

\$Index values were developed to make it easier to determine which animals are more suited to particular markets. Breedobject creates these indices, where it places relative emphasis on particular traits suited to each particular market. In this catalogue we have listed the new \$Index Values which replace the previous four \$Index Values. The new \$Indexes are:

ANGUS BREEDING INDEX This is a general purpose selection index that is suitable for use in the majority of commercial beef operations. It estimates the genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This index is not specific to a particular production system or market end-point, but identifies animals that will improve overall profitability in the majority of commercial grass and grain finishing beef production systems. It is particularly suited to producers who sell into a variety of different markets.

DOMESTIC INDEX Estimates the genetic differences between animals in net profitability per cow joined for a commercial self replacing Angus targeting the domestic supermarket trade. Steers are assumed to be finished using either grass, grass supplemented by grain or grain (eg 50 – 70 days) with steers slaughtered at 490 kg live weight (270 kgs carcass weight with 12 mm P8 fat depth) at 16 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.

HEAVY GRAIN INDEX: Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 200 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 760 kg live weight (420 kg carcass weight with 30 mm P8 fat depth) at 24 months of age. Daughters are retained for breeding and therefore maternal traits are of

importance. There is a significant premium for steers that exhibit superior marbling.

HEAVY GRASS INDEX Estimates the genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 620 kg live weight (340 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Daughters are retained for breeding and therefore maternal traits are of importance. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.

Red Colour Gene (RC)

The red colour gene is a simple recessive gene. Red Angus animals have two copies of the red gene (remember all genes come in pairs). Animals with only a single copy of the red colour gene will be black in colour, but can have red progeny if joined to other animals carrying the red colour gene.

If a Red Angus male and Red Angus female are mated, then 100% of the resultant progeny are expected to be red in colour. If a Black hided red gene carrier is mated to a Red Angus, then 50% of the progeny are expected to be Red and the remaining 50% are expected to be Black animals carrying a single copy of the Red gene (i.e Red gene carrier animals). If two Red gene carriers are mated, 25% of the progeny are expected to be Red in colour, 25% will be Black non-red carriers and 50% will be Black carrier animals.

At Te Mania Angus we DNA test animals we know could carry the Red Gene. The DNA results are available upon request.

STRUCTURAL TRAIT EBVS

The Beef Class Structural data was re-analysed following submission of further records scored by accredited assessors. At present, there are five traits analysed for over 9000 animals which were scored before they were 750 days of age. The number of traits analysed is likely to be expanded as further research is conducted on the structural scores available.

The five traits analysed (and the flags associated with the EBV) are:

FA: Front Feet Angle (ST indicates steep angle, SH indicates shallow angle)

FC: Front Feet Claw Set (OD indicates open divergent claws, SC indicates scissor claws)

RA: Rear Feet Angle (ST indicates steep angle, SH indicates shallow angle)

RH: Rear Leg Hind View (BL indicates bow legged, CH indicates cow hocked)

RS: Rear Leg Side View (SR indicates straight rear legs, SI indicates sickle hocked)

More positive EBVs indicate a higher genetic potential for the desirable form of the structural trait compared to the average for the analysis.

The EBV flags only appear against animals that have more extreme, negative breeding values. The flags indicate the type of undesirable structural variation the animal tends to have. For example, a bull with a flag of 'ST' next to its FA EBV may produce about 35% or more progeny with steep feet angle; while a bull with a flag of 'SH' may produce 35% or more progeny with shallow feet angle. Therefore, using EBVs and flags in combination will assist breeders in making the right decision to improve the structural soundness of their herd. Sires with at least 40% accuracy for a Structural EBV are reported.

Further information on Structural Scoring and the analysis of the structural traits can be obtained from the Angus Australia web site.

DOCILITY TRAIT EBVS

Docility EBVs are expressed as differences in the percentage of progeny that will be scored with acceptable temperament (i.e. either "docile" or "restless").

Higher, more positive, Docility EBVs are more favourable. For example, a bull with an EBV of +20 would be expected to on average produce 15% more progeny with acceptable temperament than a bull with an EBV of -10.

PERCENTILE BANDS FOR 2014 CALVES

Angus Breedplan EBV percentile bands for animals born in 2014*

Use this table as a guide to compare individual animals with the current generic level of the Angus breed.

*based on EBVs from the June 2016 Angus BREEDPLAN analysis.

Stylish and balanced with good natural thickness shown by this AI conceived son of Te Mania General VTMG429. We have sold General sons to a high of \$14,000. The dam of this bull comes from a strong maternal line with the past four generations of females on the dams side contributing 208 progeny to our herd. The dam of this bull remains active within the stud herd as a rising ten year old cow. The previous three generations on the dams side are all conceived by ET and come from our prominent Lowan cow family line.

HEALTHY HEIFERS. MATERIALISED INVESTMENT.

Heifers are the future of your herd. They hold the genetic potential of your operation. That's why it's important to protect them from Pestivirus. It's well known that Pestivirus can reduce your reproductive performance. Just a small drop in conception and calving rates can have a significant impact on your bottom line. That's why you should vaccinate all heifers with Pestigard. Vaccinate twice within 6 months, prior to joining, to get the best reproductive performance from your heifers.*

Protect your heifers potential. Vaccinate with Pestigard.

*Refer to product leaflet for details of administration and product claims.

This true super sire is a large framed, athletic bull who provides a boost to growth and carcass quality, without sacrificing shape in his progeny. Ranked first in Australia for the most progeny performance recorded in the last two years, his balanced EBVs endorse his performance, as a trait leader for 600 day growth, carcass weight and IMF%. Regent was selected by Andrew Gubbins for his carcass quality, fertility and very sound structure. Purchased in partnership with Te Mania NZ and Dunoon Angus in 2010 for \$50,000. In 2013, he was sold to Peakes Angus with semen rights retained by the existing partnership. Regent is in increasing demand internationally, with semen exported to NZ, The USA and UK.

Festivity is a moderately framed stylish bull with good butt shape. He is an exciting son of Te Mania Calamus. Another Calamus son, Te Mania Foe F734, topped our Autumn 2012 sale, selling to Granite Ridge Angus. In 2016 Te Mania Foe sired the top priced bull at the Granite Ridge sale in 2016, selling for \$52,000. Festivity's dam, Te Mania Mittagong B112, remains active within the stud herd as a rising ten year old. She has been a donor in our embryo transplant programs in 2009, 2012 and 2014. Festivity has been used both by AI and naturally in the Te Mania Angus herd, and he has been heavily used through Team Te Mania progeny test herds. His progeny impress, are well put together and present with good natural thickness and butt shape. Festivity is a trait leader for milk and IMF%. Grand sire pictured.

We purchased an interest in the sire of Flame from New Zealand as an outcross option. Flame himself is a well framed bull with heaps of capacity, butt shape and body length together with a placid temperament. Many of these attributes he has passed onto his sons. Flame is a trait leader for gestation length, 400 and 600 day weight, milk, scrotal size and carcass weight. He has been heavily progeny tested through Te Mania Angus and Team Te Mania herds.

Te Mania Garth VTMG67 is a versatile, multi-purpose sire with exceptional EBVs. He is a moderate to large framed son of Te Mania Africa, with the same outstanding temperament. He has good body length, is free moving with slick skin and fine hair, tight sheath and outstanding structure.

Garth is ideal for heifer joinings with high accuracy, low birth weight and short gestation length EBVs. He has exceptional fertility and marbling, both in the top 1% of the breed. As a sign of his versatility he is in top 5% for all \$Indexes and is a trait leader for gestation length, scrotal size and IMF%. Garth bends the growth curve with moderate birth weight to high 600-day growth. Te Mania Garth's maternal grand-sire is Te Mania Yorkshire VTMY437, sire of Te Mania Berkley VTMB1. His pedigree includes longevity and some of the great female lines of the Te Mania Angus herd, including Te Mania Beac W112 and Te Mania Jedda Y32, who bred in the stud herd to 10 years of age.

Te Mania Governor G576 is the first calf out of a two year old heifer and as a mark of his rising standing, in our autumn 2016 sale, a son sold to Dulverton Angus for stud use for an equal sale top of \$23,000 and further seven sons sold for an average of \$10,428. He possesses high calving ease together with good growth and a moderate mature cow weight EBV's. Governor has some of the great matrons of the Te Mania Angus herd in his pedigree, namely Te Mania Jedda W85 and his dam, Te Mania Dandloo E95. She is a larger frame cow with a feminine outlook, good body with plenty of length. Governor is well balanced and possesses good shape and body length and is well suited for use over heifers. He has high Index values and good carcass traits and has been used within the Te Mania Angus herd and progeny tested through Team Te Mania herds and is a trait leader for gestation length and IMF%.

NOTES

BREEDING THE BEST, BACKED BY FEEDLOTS

Relationships and a passion for genetics drives Te Mania Angus herd success for the Coulton family at Goondiwindi.

Story by Amy Lawson

Below: Andrew, David and Sam Coulton.

FEW would argue that success in business begins and ends with people, and the systems set up to manage relationships.

With most farming businesses being family-owned and managed, the value on relationships is even greater and the stakes sky-high.

David and Kim Coulton, "Morella", Boggabilla, south of Goondiwindi, have a multi-generation tale that epitomises what's possible, with family succession well underway and each of their three sons playing vital roles in the business today.

Managers and employees are considered their "most important asset", and agronomic, financial and marketing advisors all are respected and their input highly valued.

Kim is the daughter of Bob and Kerrie Crothers, who owned "Rangers Valley" at Glen Innes (where Kim grew up) and established its feedlot – now the fourth largest in Australia with a 32,000-head capacity.

She and David bought their first quality breeders from the Rangers Valley dispersal sale in 1999.

That childhood link with Rangers Valley continues today, with the Coultons marketing the majority of their Te Mania-blood Angus steers at 430-500kg to Rangers Valley Feedlot, in a supply arrangement that has through feedback highlighted the industry-leading performance genetics of their 4000-head Te Mania-blood Angus cow herd.

The Morella Agriculture cropping and cattle business encompasses a wide geographical spread, from Ebor in the NSW Northern Tablelands to the black soil plains surrounding Goondiwindi – the family's home town – to the iconic Channel Country.

The family runs most of their Angus breeders on the Goondiwindi properties, utilising natural pastures and forage crops when necessary, including to produce fodder to maintain cow condition during recent dry years.

"We believe this helps augment good weaning weights, marbling and female fertility," Mrs Coulton said.

"The seasons dictate exact weaning age but we do early wean.

"This is done by yard feeding and they are then worked outside with horses and motorbikes."

The male portion is then backgrounded and finished on high-rainfall rye/fescue/red clover pasture-based country in the Ebor district, east of Armidale.

In March 2015, the family were the successful tenderers to lease "Nappa Merrie" - 7,275 square kilometres of Queensland channel country located three hours west of Thargomindah, with double frontage to Coopers Creek and bound to the west by the South Australian border.

TE MANIA ANGUS NORTHERN SPRING BULL SALE

They retained the previous manager, Peter "Whip" Degoumois, and his family, to run "Nappa Merrie" and the Coultons all clamber to be first in line to help out during busy times of processing and mustering.

There, they have the capacity to run up to 20,000 head.

The property is presently running crossbred flat back cattle - a combination of breeders and steers to be turned off as bullocks or sold to feedlots, depending on the season and markets, and with ambition to tap into the increasingly popular grass-fed market.

"Last year, we sent some Angus heifers out there and they have acclimatised and are handling the area extremely well," Mrs Coulton said.

"We are now infusing Angus with our crossbred females out there.

"We have been lucky enough to have recently received a wonderful four inches of rain, which has set us up for an amazing winter."

"Nappa Merrie" is home to the iconic 'Dig Tree', made famous for its part in the 1861 Burke and Wills expedition.

Mr and Mrs Coulton's three sons, Thomas 30, Andrew 29, and Sam 25, each live on and manage separate properties for Morella Agriculture, bringing youth, enthusiasm and practical common sense to the group - Tom and Sam attended Marcus Oldham College and Andrew Sydney University.

Tom and wife, Bridget, are based at "Tandawanna North", Bungunya, Andrew at "Neilo", Toobeah, and Sam on the home place "Morella" at Boggabilla.

These properties all run Morella Agriculture's Angus breeding herd, which is split into age groups and multi-joined to sires with similar bloodlines.

The family also produces cotton, wheat, chickpeas, barley, sorghum and corn for grain and silage - from both irrigated and dryland farming.

Despite traditionally preferring to fly 'under the radar', the Coultons are now realising the need to support an increased growth in breeding numbers with a strong marketing strategy.

"We are looking at creating a beef brand and at present studying market opportunities overseas," Mrs Coulton said.

Mr and Mrs Coulton made the decision in 1999 to breed straight Angus cattle, availing themselves to the largest genetic pool of any beef breed in the country.

They utilised the knowledge and experience of southern NSW agent, Gerard Ryan, Brian Unthank Rural, Albury, to select a number of Angus females from various producers.

At the annual Gundagai short grass sale, the family paid a then-Australian record for three pens of Angus females.

They then headed back south in 2000 to purchase their first bulls from the Gubbins/McFarlane family's Te Mania Angus Stud, Mortlake, Victoria.

"They had a really good name and we really liked their bulls," Mrs Coulton said.

From there grew another strong business relationship, with the Coultons sourcing Te Mania ever since, including sale toppers such as in 2002, when they paid \$26,000 for Te Mania Ventilate V196, by B/R New Design 036 from the wonderful cow Te Mania Lowan R426 by Norman N48.

"We AI'd V196 extensively and he made a wonderful impact on our herd," Mrs Coulton said.

"This bull was still working as a paddock bull in 2009, which is testament to his wonderful structure, temperament and do-ability.

"Over the years, we have used 036 bloodlines extensively, followed by Ulong, Unlimited, Future Direction, Traveller, Kenny's Creek Sandy, Highmark, Yorkshire, Africa, Berkley, SAF Focus, Destination, Regent, and Ardrossan A241, whom we purchased and then sold back to Rob and Sally Bulle after several years of paddock use as we deemed him too good a bull just to be used exclusively by us.

"From these bloodlines, our bull selection has been based on the Japanese B3 market, focusing on marbling, yield and growth whilst also balancing eye muscle, calving ease and very importantly structure - in particular feet and temperament, and slick-coated animals where possible."

Morella Agriculture has always been at the top-end of suppliers to Rangers Valley Feedlot.

"Our steers are consistently in the top two or three performing herds at the feedlot with outstanding yield and marbling, while maintaining a strong uniformity," Mrs Coulton said.

"We follow a down-to-earth, practical breeding regime for our commercial herd.

"We strongly believe females are not to be overlooked and place strong emphasis on our maternal lines.

"If you have a poor quality cow, half the genes in her calf will be poor also.

"Regardless of how strong the bull is, one cannot overcome this handicap.

"Te Mania bulls have helped shape our maternal line with docility, strong calving ease characteristics and are wonderful milking mothers with very high fertility, constantly cycling and calving early."

The Coultons' Angus females consistently achieve conception rates of above 90%, even in poor years.

"We fertility test bulls every year and owing to the great structure of the Te Mania bulls, their breeding longevity is better than most of the breed," Mrs Coulton added.

The Coultons have been in herd building mode for some years so have retained most of their females.

"Our cull cows each year always make a premium at the works, being high yielders and still having good quality meat," Mrs Coulton said.

The family all enjoy the diversity of the aggregation, which is reflected in their enthusiasm, diligence and passion for agriculture.

From left, Bridget, Tom, Kim, David, Andrew and Sam Coulton
