Welcome to Sevenbardot at 'Wigelmar'

How the world has changed in just 12 months.

Interest rates are at historical lows.

Cattle prices are at historical highs.

Seasonal conditions good to very good over most of the country.

We are rolling along here enjoying the above changes. We have a new grandson. Sam and Amy have Max born 27/11/15.

We are offering 40 two year old bulls and for the first time 14 yearling bulls. The bulls all look good on a limited preparation. We have retained one two year old for our own use.

The yearlings are exceptional. They are all heifer's first calves and include three or four with sire potential.

We hope you will all be here on sale day for a good steak, a beer and a good get together.

The Gunn Family

Sue and Angus with John Patterson.

The Dubbo Team, Jim with Mike & Jill Harvey.

Amy & Sam with Max.

Sue with Max - he likes Toblerone.

7.

SALE DAY

Information

DATE

Friday, 9th September 2016

TIME

Bull Sale commences 1pm.

VENUE

Wigelmar, 6749 Bylong Valley Way,
Bylong NSW 2849.

INSPECTION

From 10am on sale day or by appointment.

SELLING AGENTS

Landmark Townsend 02 6545 1377
Elders Pastoral 02 6372 3444

AUCTIONEER

Paul Dooley 0428 667 441
0458 662 646

REBATE

5% to all agents introducing client prior to sale.

Auctions Plus

Will be on Auctions Plus. Refer to page 5.

DELIVERY

Free delivery to Wagga, Carcoar, Dubbo, Condobolin, Bourke, Goondiwindi, Tamworth, Scone and Singleton. Drop offs can be arranged at towns on routes travelled to above towns.

Terms & Conditions

As displayed on sale day.

HEALTH

All bulls are free to all states of Australia except WA.
We are a Johnes Protected area.
Any tests that are required will be carried out at no cost to the purchaser.

INSURANCE

Brokers will be present on the day.

REFRESHMENTS

Morning Tea and lunch will be provided.

Liability

The owners, employees, sale staff and representatives accept no responsibility for accidents that occur. Any persons attending do so at their own risk.

THE EYE CANCER

Myth

In 1958 Wally and Marg Gunn bought Gubbagunya at Goondiwindi. The purchase included 500 hereford cows and calves. This herd was 30% affected with eye cancer. For the next 15 years Wally monitored and recorded the progress he made with this problem.

Step one was to purchase bulls that would help with the eradication. This he did from Merawah using only sons and grandsons of Merawah Revenge.

Observations:

1 The same number of red eyed cows as white cows were culled with cancer.

2 Two popped eyed cows to every one well set eyed cow were culled for cancer.

3 Three types of cancer were found to be present

- (1) Eye ball cancer, which accounted for 80% of the cancer cases. It was found to be very hereditary. Where possible the daughters of eyeball cancer cows were identified and studied. 80% of these daughters were found to have eyeball cancer by the time they were five years old. Red eyes had no effect on this cancer. Hence culling removed the eyeball cancer very quickly.
- (2) Third eye lid cancer accounted for about 15% of the cancer cases. It looked like a piece of broccoli when it grew. The incidence increased when cattle were handled more than normal and when conditions were dusty and flies were thick. It was found by snipping the infected third eyelid off when the cancer was small eliminated it. The cancer/infection never returned once it was snipped. Thus we felt this was a virus spread by flies when the third eyelid was bruised or grazed. Red eyes had no effect on this cancer either. Better handling of the cattle did.
- (3) Eye lid cancer accounted for about 5% of the cancer. Red eyes did have a small effect here with about 70% of the affected cows having white eyes.

At the end of the 15 year study our incidence of eye cancer of any type was 0.01%. The same result was obtained on a five year study of 1500 cows at Mount Riddock at Alice Springs 0.01%. They have been buying bulls from Sevenbarlot and Merawah since 1976 (40years). This reinforces for us the heritability side of this perceived problem. The understanding we drew from all this was that most cancer was hereditary and could be nearly eliminated by strict culling of all eyeball cases and their daughters.

Third eyelid cancer could be reduced by more carefully handling the cattle and by snipping any infected eyelids in the early stages. It never returned after snipping.

Eyelid cancer was fairly insignificant in the scheme of things. Red eyes did have some effect on it. It mostly only came in cows over 5 years old.

This information was given to the Qld D.P.I. but was not acceptable, as a qualified person did not supervise it. Wally's reply was who more qualified than the person paying for the losses caused by the disease.

Our conclusion is that we don't cull white eyes from our herd if the eyes are well set. It has not stopped us from using white eyed bulls if their eyes are well set and they have attributes we are looking for in our herd.

With a heritability of about 4% red eyes are not that important in producing kilograms of beef per animal or per hectare.

Too many great bulls are overlooked because they have even one white eye or don't have big red rings round both eyes. This fad has been hammered for so long because red eyes are easy to see and do make cattle look attractive.

Look at the other attributes in your cattle that are going to make you more money rather than the cosmetics that have very little affect on profit gained at the end of the day, like increased fertility or extra length which gives you more weight and yield.

Just something to get you all thinking and talking and hopefully observing in your own herd what is one of our PERCEIVED problems.

BUYING BULLS

A Different Perspective

BUYING bulls is difficult. It is like playing sport you need to be in form which means you need to practice. Buying bulls once a year doesn't give you that practice you need so the following questions arise -

- How much do I spend?
- Which one do I buy?
- What am I really selecting for?
- What do all these figures mean?
- Who do I go to for help?

Let us work our way through this list.

1 You should be prepared to spend somewhere between 8 and 10 times what your weaners average or 5 to 6 times what your bullocks make if you are to maintain your present herd standard. If you are trying to lift your herd performance you may need to spend a little more or you may get lucky and the bull you pick may come in under budget.

2 When you first arrive at the sale walk through the bulls from the last lot to the first and cross out any bull you don't like. Then go and have a cuppa and think about what you have seen. Then go back through the bulls that you have not crossed off from lot 1 to the end. Select the bulls you like, and make sure you pick at least twice as many as you need. Now go and look at the bulls EBVs and INDEXES and place the bulls in the order you would like and put a price on them that you are comfortable to pay. Now if you need any help go to your adviser and ask. I suggest you ask the owner as you then put him on the spot to help you and no one knows more about these cattle than the owner. If you are going to ask someone else make sure he is someone who breeds cattle.

3 I would hope you would have some idea of what you are trying to achieve with your breeding program. Select the bulls that have strengths in the areas that you have weaknesses in, and where possible have strong EBVs in these areas. For example if you are trying to increase the size of your cow herd pick a bull that is quite a bit bigger than you require and has EBVs above herd average and who has a birth weight figure that is no more than 10% of 600 day growth. You may have to give away a little in an area that you are strong in to get the bull you want but can fix that with your next sire.

4 There are a lot of figures pushed at us today and they are confusing even for those of us who work with them all the time. I suggest if you want a technical answer ask a geneticist or a departmental person. If you want a practical answer ask your seedstock producer or someone you know who has a good herd that you know uses Breedplan as a selection tool. I suggest you select your bulls and then look at the figures and go for the bulls where Breedplan supports your selection. However I would not eliminate a bull that I really liked if his figures were not quite as good as he looks.

5 Where to for help? If you were comfortable with the owner of the bulls then I would start there. If not take someone with you who you are comfortable with and who has a herd of cattle that you wished you owned. He does not necessarily have to have the same breed. And last but not least back your own judgement. However if you are getting advice and feel you need it don't ignore it? Remember it is not use going to the doctor, if you are not going to take the medicine.

I hope this has been of some use to you as it was to me when I was given it some 20 years ago. If you don't know, ask or you will never know.

AuctionsPlus

Buy and Sell stock nationally

**All lots will be interfaced with
*AuctionsPlus***

Contact your local agent for details.

Our sale is live on-line in real time, and will be interfaced on AuctionsPlus with the physical auction that is being conducted by an auctioneer. A hand held wireless connected computer is used to bring the on sire bid price to the internet screen for remote bidders to observe.

These remote bidders can bid on computers at their location and the bid is immediately transferred to the auction barn through the wireless computer and relayed to the auctioneer.

* Bidding is only available to registered AuctionsPlus users.

* You must register at least 24 hours prior to the sale with AuctionsPlus Sydney on their website.

HEREFORD EBVs

Explained

The EBVs contained within this catalogue can be validly compared with other Hereford GROUP BREEDPLAN EBVs or Hereford INTERIM EBVs in other herds. These EBVs can not be used to compare animals of another breed.

ESTIMATED BREEDING VALUES (EBVs): An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These are called Estimated Breeding Values (EBVs). The EBV is therefore the best estimate of an animal's genetic merit for that trait. EBVs are expressed as the difference between an individual animal's genetics and the genetic base to which the animal is compared.

ACCURACY: An accuracy value is presented with every EBV and gives an indication of the amount of information that has been used in the calculation of that EBV. The higher the accuracy, the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

Although the accuracy of an EBV should be considered, animals should be compared on EBVs regardless of accuracy. Where two animals have the same EBV however, the animal with the higher accuracy would normally be used more heavily than the bull with the lower accuracy because the results can be predicted with more confidence.

CALVING EASE:

Calving Ease EBVs are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

Direct: Direct calving ease indicates how this animal influences the birth of its progeny.

Daughters: Calving Ease - Daughter's indicates how well the animal produces daughters that have easier calving.

BIRTH

Gestation Length: The GL EBV (days) is based on AI records. Lower (negative) GL EBVs indicate shorter gestation length and generally easier calving.

Birth Weight: The Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

FERTILITY

Scrotal Size: The SS EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

Days to Calving: The DC EBV (days) is an indicator of female fertility based on the time between a cow's first exposure to a bull and when she subsequently calves. Cows that calve late in the season or fail to calve are penalised. This is more useful as a sire trait. Lower (negative) EBVs

are preferred indicating shorter days to calving for the sire's daughters.

GROWTH

Milk: 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200-day weight of their calves.

200-Day Growth: The 200-Day EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight: The 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight: The 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight: The Mature Cow Weight EBV (kg) is an estimate of the genetic difference in cow weight at 5 years of age. Smaller, or more moderate EBVs are generally more favourable.

CARCASE

Carcase Weight: The Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

Eye Muscle Area: The EMA EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals.

Rib Fat: The Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Rump Fat: The Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

Retail Beef Yield Percent: The RBY% EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcase. A more positive EBV indicates higher percentage yield for the 300kg carcase size.

Intramuscular Fat Percent: The IMF% EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300kg carcase. Depending on market targets, larger more positive values are generally more favourable.

\$INDEXES

Explained

SELECTION INDICES

Supermarket: The Supermarket Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting the domestic supermarket trade. Steers are either finished on grass or grain (eg 50-70 days). Steers are assumed marketed at 450kg live weight (250kg HSCW and 12 mm P8 fat depth) at 17 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

Grass Fed Steer: The Grass Fed Steer Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture finished steers. Steers are assumed marketed at 600 kg live weight (330 kg HSCW and 8 mm P8 fat depth) at 23 months of age. Daughters are retained for breeding. In response to industry feedback regarding eating quality and tenderness, a small premium has been placed on marbling.

Grain Fed Steer: The Grain Fed Steer Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture grown steers with a 125 day feedlot finishing period for the grain fed markets. Steers are assumed marketed at 600 kg live weight (330 kg HSCW and 20 mm P8 fat) at 20 months of age. Daughters are retained for breeding. There is a significant premium if steers reach a marble score of 2 or greater.

EU: The EU Index estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd targeting pasture finished steers for the EU market. Steers are assumed marketed at 620 kg live weight (340 kg HSCW and 14 mm P8 fat depth) at 24 months of age. Daughters are retained for breeding. There is no marbling requirement.

- 115km from Muswellbrook

- Please Drive Carefully -

BEST QUOTE OF AN ERA

*"The Budget should be balanced,
the Treasury should be refilled,
public debt should be reduced,
the arrogance of officialdom should be tempered and controlled,
and the assistance to foreign lands should be curtailed,
lest Rome will become bankrupt.
People must again learn to work instead of living on public assistance."*

- CICERO, 55BC

So, evidently we've learned bugger all over the last 2,060 years.
